

1	Area is located within the 100 year floodplain.	35
2	Area is located within 180 feet of a riparian area.	30
3	Area is located within the St. Joseph River (Maumee) watershed.	35
4	Area is impacting a special water quality area of concern as identified by the SWCD board.	35
5	Participant will maintain a minimum 30% cover on all cropland.	30
6	Planning soil slope is...	
	equal to B slope	10
	greater than B slope.	20
7	Area is located in a watershed on the IDEM 303 (d) Impaired Waters list.	35
8	EQIP practice will solve a problem on a livestock operation with...	
	no planned expansion, or	25
	less than 50% expansion, or	4
	greater than 50% expansion.	1
9	Existing livestock operation has less than 180 days of storage and EQIP practice will provide 180 days of storage	30
10	Existing livestock operation has potential for direct discharge into an open ditch through surface flow or tile drain.	30
11	EQIP practice will remove livestock access to open drain	30
12	Area is within designated well-head protection and ground water recharge area.	30
13	Area is within a Threatened and Endangered Boundary.	30
14	Presence of surface inlets in need of protection.	30
15	Area is adjacent to a permanently protected area (i.e. WRP, State property etc..)	30
16	Existing woods has a Forest health concern	30
		500
